1.3 The Water Cycle (Summary)

- **Evaporation:** Solar radiation heats surface water bodies, causing water to transition from liquid to vapor.
- **Condensation:** Water vapor rises and cools in the atmosphere, forming clouds.
- **Precipitation:** Accumulated moisture in clouds falls to the earth as rain, snow, sleet, or hail.
- **Collection:** Precipitated water gathers in oceans, rivers, and lakes, or infiltrates the ground as groundwater, restarting the cycle.
